Waste Audits

Does this sound familiar?

Your recycling scheme is up and running and staff seem to be using the recycling bins. But every week your waste bins are still full, and your waste disposal costs haven't reduced. What to do?

A waste audit can help improve your recycling rates

It's really important that you understand what you are still throwing away. A waste audit will analyse your waste to see how efficient your recycling scheme is. With that data, Paper Round can identify problem areas in your scheme, and can then target improvements in your recycling to dramatically cut your waste bills.

Results from a typical Waste Audit

Off-site waste audit

- 1100 litre bins are taken off site to our depot
- The contents are hand sorted and the weight of each component is recorded

On-site waste audit

- Sacks or bins are held back at your premises for your account manager to analyse
- The contents are hand sorted and the volume of each component is recorded

Visual waste audit

- Our environmental champion visits your site
- Waste or recycling bins are selected for analysis
- We visually assess the contents of each container

For all types of audit a detailed report is compiled, including recommendations.
